

COLOR LACQUER

Nailtiques Color Lacquer is infused with the same protein blend in our famous nail treatments. These colors can be used with our new 'Base Wear with Protein' and 'Quick Dry Top Shine'. The colors work in conjunction with all of our protein treatments, allowing them to penetrate through the lacquer for maximum effectiveness. When ordinary nail polish is applied, the polish inhibits the great benefits of the nail protein. Our unique blend of color lacquer with protein provides maximum effectiveness. Available in a variety of shades, the nail protein or Base Wear provides nails with an extra protein boost.

APPLICATION: Apply one coat of nail protein or Nailtiques Base Wear followed by two coats of color lacquer. Finalize treatment with one coat of Nailtiques Top Shine.

REMOVER W/ACETONE

Nailtiques Remover with Acetone is a non-oily formula enriched with tea tree oil, lavender and aloe that will help prevent nails or cuticles from drying out. Although a powerful remover, it is formulated to not damage the nails.

APPLICATION: Saturate cotton with remover. Press the cotton over the nail surface for several moments allowing the remover to dissolve the protein and/or polish.

PRODUCT INFORMATION

FORMULA 1

MAINTENANCE FOR HEALTHY NAILS

This formula is a unique blend of balanced ingredients which protects and maintains healthy nails, preventing them from becoming hard. Everyone's goal is to graduate to this formula. Once nails have stopped peeling, splitting and have strengthened, Formula 1 is the proper formula for regular use.

APPLICATION: Without color polish, apply one coat three times per week. With color polish, apply Formula 1 as a base coat and apply polish. Formula 1 may be applied once or twice during the week as a top coat.

FORMULA 2

TREATMENT FOR SOFT, PEELING, WEAK, BITTEN OR THIN NAILS

This formula treats nails that are naturally soft, peeling, split or just won't grow. The protein immediately acts to help bond nails that are splitting or peeling. It also assists in strengthening the nail to grow long, strong and healthy. Once nails have improved, graduate to Formula 1.

APPLICATION: For initial treatment, apply one coat daily without color polish. As nail condition improves, decrease application. If color polish is desired, apply Formula 2 as a base coat. An additional coat of Formula 2 may be applied during the week as a top coat.

FORMULA 3

CARE FOR NATURALLY HARD, DRY NAILS

Naturally hard nails need the constant care which this formula will provide. This unique blend will help bond nails together, as well as prevent them from becoming dry and rigid. Nailtiques Nail Moisturizer is a must when using this formula.

APPLICATION: When used without color polish, apply one coat three times per week. If color polish is desired, apply Formula 3 as a base coat and then apply color polish. An additional top coat may be applied during the week to prolong polished nails.

FORMULA 2 PLUS

TREATMENT FOR EXCESSIVE PROBLEM NAILS

This formula is not recommended unless Formula 2 has been used and weak, peeling condition continues to exist. Color polish is not recommended with this formula as it will prevent the protein from working to its full potential. This formula is designed to assist nails in overcoming stubborn problems allowing long, strong nails. Once nails have improved, return to Formula 2.

APPLICATION: Apply one coat daily without color polish. As the condition of the nails improves, decrease application. If color polish is desired, Formula 2 Plus may be used as a base coat followed by color polish.

AFTER ARTIFICIAL TREATMENT

This treatment consists of two formulas designed to be used in stages upon removal of artificial nails. These formulas, Formula A and Formula B, are designed to immediately act to strengthen and bond the nail as well as condition damaged areas of the nail.

APPLICATION: For initial treatment, apply one coat of Formula A daily without color polish. Upon completion of Formula A, begin Formula B. Continue daily application until nails begin to improve.

NAIL MOISTURIZER

A collagen and aloe based nail creme which promotes moisture and flexibility within the nail. This nail creme is essential in the winter months when nails become dry. Nails lacking moisture or flexibility are targets for splits or breakage. Dryness could prevent the nail protein from promoting beneficial results.

APPLICATION: For maintaining nails, apply the Nail Moisturizer three times a week. For Formula 3 users or nails containing excessive white spots, daily application is essential.

NOTE: When nails are polished, whether it is with nail protein or color polish, no substance will penetrate to the nail bed. This includes any oils or nail creme.

CUTICLE & SKIN GEL

A glycerin and aloe based creme designed to soften dry skin. This creme may be used as often as necessary to soften dry skin without softening nails. The unique blend of ingredients seals in moisture, resulting in soft, smoother skin.

APPLICATION: Apply in small amounts to dry areas of the skin as often as needed. For best results massage hands with Nailtiques Hand Conditioner prior to application. When used for the feet, massage Nailtiques Avocado Foot Creme to feet, legs and then continue application with Nailtiques Cuticle & Skin Gel to dry and calloused areas. Heat may also be applied to promote results. The heating action allows the creme to penetrate deep into the skin.

NOTE: Due to the concentration of this creme, apply sparingly. Applying large quantities will reduce the penetrating action.

HAND CONDITIONER

A thick, non-greasy hand creme formulated to soften hands and cuticles. The unique blend of ingredients in this creme allows application as often as needed to maintain moisture to the skin without softening the nails.

APPLICATION: Massage hands with Hand Conditioner as needed to soften dry skin. For excessive dry skin, after massaging Hand Conditioner into hands and cuticles, apply Nailtiques Cuticle & Skin Gel to dry areas. For best results apply creme at the end of each day when fewer activities or tasks are performed.

NON-ACETONE REMOVER

An acetone-free formula that is gentle to both nails and skin. This blend of ingredients, which includes aloe vera and conditioners, protects nails while effectively removing nail protein and/or polish.

APPLICATION: Saturate cotton with remover. Press the cotton over nail surface holding it for several moments allowing the remover to dissolve the protein and/or polish.

AVOCADO FOOT CREME

A deep penetrating, non-greasy moisturizing creme rich in avocado oil. Specially formulated for feet to aid in the healing of rough, dry or cracked skin. Ideal for use on calloused areas.

APPLICATION: Use regularly for maximum benefit. Massage in thoroughly.

NOTE: Nailtiques Thermal Hot Boots or a pair of socks are beneficial in promoting results. The heating action allows the creme to penetrate deep into the skin.

OIL THERAPY

A blend of natural oils which promotes and seals in moisture to nails, cuticles and any other skin surface suffering from dryness. This blend is specially formulated to not only restore moisture but it gives nails and skin a healthy glow. This Oil Therapy is unique due to the fact that no matter how often it is applied nails will not soften.

APPLICATION: Apply several times a week to cuticles and nails with or without polish to replenish oil to skin and nails.

For nails with white spots: (usually the ring and pinkie fingers) apply directly on the nail surface as often as possible.

For Drying Nails: Apply over your polish after it has started to dry (about 10 minutes) to help set polish and avoid smudges.

FORMULA FIX

A protein based thinner that will restore and maintain a smooth consistency to thickened nail protein without affecting your prescribed formula.

FORMULA FIX INSTRUCTIONS: Add 2-3 drops of Formula Fix to thickened nail protein. Turn protein bottle upside down and roll between the palms of your hands to blend ingredients. Check consistency. The protein should drip freely from the brush.

FOR BEST RESULTS: Add Formula Fix when nail protein begins to thicken.
